EDUCATION

Ontario Tech University

Sep 2023 – Apr 2027

Bachelor of Engineering (BEng) - Software Engineering Co-op (Honours)

Oshawa, ON

- **Coursework:** Data Structures & Algorithms, Databases, Systems Programming, Artificial Intelligence, User Experience

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, SQL, C++, C#

Frameworks: React, Next.js, Node.js, Express, React Native, FastAPI, Flask

Databases/Cloud: PostgreSQL, MySQL, Supabase, AWS, Docker

Tools/AI: Git, Jira, Postman, OpenAI API, LLMs, Power BI

Concepts: REST APIs, Authentication, RBAC, Testing, Debugging, SDLC, Incident Triage

EXPERIENCE

Software Developer

May 2026 – Aug. 2026

Canadian Golf Brands Alliance

Toronto, ON

- Refactored **3+ core workflows** across a legacy PHP/Symfony event and membership management platform, restructuring application logic, database queries, and registration flows to improve maintainability and support multitenant functionality across client environments
- Implemented tenant scoped registration workflows and data access controls across routing, backend logic, and database layers, resolving schema and data access issues to maintain reliable **data isolation** between client environments
- Evaluated scheduling, membership, and engagement workflows and presented a prioritized AI modernization roadmap spanning **3 initiatives**: automated scheduling, personalized recommendations, and predictive engagement analytics for future platform development

Full Stack Developer

Jan. 2026 – Apr. 2026

SGMC Canada

Toronto, ON

- Built **3 core workflows** including user onboarding, role based access control, and administrative dashboards using Next.js, React, Node.js, and PostgreSQL with protected routes and database backed application logic across the platform
- Designed and implemented **REST APIs**, PostgreSQL queries, and authorization checks connecting frontend workflows with backend services and persistent application data across user and administrative workflows
- Diagnosed and resolved authentication, API, database, and UI defects across the complete UI to API to PostgreSQL flow, validating fixes end to end and documenting root causes

Frontend Developer

Sep. 2025 – Dec. 2025

Solara Tech

Toronto, ON

- Engineered and launched a **10+ page** production React website from Figma designs, developing reusable UI components and responsive layouts across desktop, tablet, and mobile screen sizes
- Owned frontend delivery through production deployment, implemented on page SEO, and resolved responsive layout and rendering defects through validation across desktop, tablet, and mobile devices

PROJECTS

RotateOps | *React, Node.js, Supabase, Slack API*

- Built an operations workflow platform using React, Node.js, and Supabase, automating recurring task assignments and reducing manual assignment steps by approximately **60%** through automated ownership tracking and recurring workflow coordination
- Designed REST APIs and Supabase backed workflows connecting task creation, assignment, status changes, real time application updates, and automated **Slack API** notifications for team coordination

NovaPrep | *React, Node.js, Express, AWS*

- Built an AI assisted exam preparation platform combining **3 core workflows** including personalized study planning, session tracking, and AI generated learning content for structured exam preparation
- Designed REST APIs and backend application logic connecting user profiles, study sessions, and AI generated content with persistent server side workflows and stored user data

ForgeFit | *React Native, TypeScript, Supabase, OpenAI API*

- Built a cross platform fitness application supporting **3 core workflows** including authentication, workout tracking, and persistent fitness data across mobile sessions and user accounts
- Developed Supabase backed authentication, database, and storage workflows and integrated the **OpenAI API** to generate personalized workout recommendations from user fitness goals and training preferences
