Education

Ontario Tech University

Sep 2023 – Apr 2027

Bachelor of Engineering (BEng) - Software Engineering Co-op (Honours)

Oshawa, ON

- **Coursework:** Data Structures & Algorithms, Databases, Systems Programming, Artificial Intelligence, User Experience

Work Experience

Canadian Golf Brands Alliance

May 2026 – Aug 2026

Software Developer

Toronto, ON

- Refactored a legacy **PHP/Symfony** event and membership management platform, restructuring application logic, database queries, and registration workflows to improve maintainability and support multi-tenant functionality
- Implemented tenant-scoped registration workflows and data access controls, diagnosing schema, routing, and database issues to maintain data isolation across client environments
- Evaluated scheduling, membership, and engagement workflows and presented a prioritized **AI modernization roadmap** covering automated scheduling, personalized recommendations, and predictive engagement analytics

SGMC Canada

Jan 2026 – Apr 2026

Full-Stack Developer

Toronto, ON

- Built end-to-end onboarding, **role-based access**, and administrative dashboard workflows using **Next.js, React, Node.js, and PostgreSQL**, implementing protected routes and database-backed application logic
- Designed and implemented **REST APIs**, PostgreSQL queries, and authorization checks connecting frontend workflows with backend services and persistent application data
- Traced authentication, API, and database defects across the **UI-to-backend-to-database** flow, implementing fixes, validating behavior end-to-end, and documenting root causes

Solora Tech

Sep 2025 – Dec 2025

Full-Stack Developer

Toronto, ON

- Engineered and launched a **10+ page production React website** from Figma designs, developing reusable UI components and responsive layouts across desktop, tablet, and mobile devices
- Owned frontend delivery through production deployment, implemented **on-page SEO**, and resolved responsive layout and rendering defects through systematic cross-device validation

Projects

RotateOps | React, Node.js, Supabase, Slack API

- Built an end-to-end operations workflow platform using **React, Node.js, and Supabase**, automating recurring task assignment, ownership tracking, status updates, and team coordination
- Designed **REST APIs** and database-backed task workflows connecting task creation, assignment, and status changes with real-time application updates and automated **Slack API** notifications

NovaPrep | React, Node.js, Express, AWS

- Built an AI-assisted exam preparation platform using **React, Node.js, Express, and AWS**, delivering personalized study workflows and dynamically generated learning content
- Designed and implemented **REST APIs** and backend application logic for user data, study sessions, and AI-generated content, connecting frontend interactions with persistent server-side workflows

ForgeFit | React Native, TypeScript, Supabase, OpenAI API

- Built a cross-platform fitness application using **React Native and TypeScript**, implementing workout tracking, user authentication, and persistent user data across mobile sessions
- Developed **Supabase**-backed authentication, database, and storage workflows and integrated the **OpenAI API** to generate personalized workout recommendations from user fitness goals

Skills

Languages: JavaScript, TypeScript, Java, Python, SQL, C++, C#

Frameworks: React, Next.js, Node.js, Express, React Native, FastAPI, Flask

Databases/Cloud: PostgreSQL, MySQL, Supabase, AWS, Docker

Tools/AI: Git, Jira, Postman, OpenAI API, LLMs, Power BI

Concepts: REST APIs, Authentication, RBAC, Testing, Debugging, SDLC, Incident Triage
